Re: OCCP, LLC Geothermal Proposal

Dear Unalaska City Council, City Manager, and whom it may concern,

As an Ounalashka Corporation shareholder and its former chief executive, I am pleased to give my enthusiastic support of the City of Unalaska going green by means of geothermal power from the Ounalashka Corporation and Chena Power (OCCP, LLC) at Makushin Volcano. Their development of the geothermal resource as well as installation and distribution of clean energy is an essential foundation to take action to reduce the environmentally dangerous emissions in Unalaska related to power production.

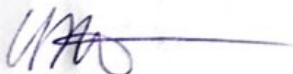

Geothermal power will provide the community of Unalaska with enhanced electrical production which will improve energy security. Unalaska can look forward to a lower electric bill to the consumer and consistent rates. Along with powering the City, geothermal power can stimulate Unalaska's involvement in additional sustainable industries such as agriculture, accommodating advanced technologies, installing energy infrastructure, appealing to eco-tourism, and attracting companies that would like to rely on clean energy to do business.

Development of Makushin's geothermal resource has been the dream of many, and has been studied by many. This time, the confluence of the right people and organizations can make it a reality that will ensure environmentally safe growth of industry on this beautiful island.

OC, through its joint venture with Chena Power, is not only presenting the City of Unalaska with an opportunity to participate in this historic moment, but is also willing to finance the project and accept the associated risk. I encourage the City of Unalaska to form an agreement with OC and Chena Power.

Thank you for your time.

Best regards,

Wendy A. Svarny-Hawthorne
